

Wyoming Data Centers Survey

Purpose, Privacy, and Method

Privacy first: We do not publish, sell, rent, or share individual responses. We publish only aggregated results.

Purpose

Wyoming is seeing increased interest in large data centers and other large-load facilities.

This survey asks Wyoming voters what standards should guide large data center development.

The goal is to measure public input, not persuade voters toward a preferred answer.

How responses will be used

- Responses will be published in aggregate.
- Exact question wording and response options will be published with results.
- Verified and unverified responses may be reported separately.
- Individual responses will remain confidential.

Privacy statement

We do not publish, sell, rent, or share individual responses.

We publish only aggregated results, such as totals by Wyoming, county, State House district, or State Senate district when enough responses are available.

We do not publish your name, email, address, phone number, voter-file record, or individual answers.

Open comments will not be published as individual quotes unless explicit permission is requested and granted. Open comments may be summarized as broad themes.

Response data is retained for the duration of the survey period and through results publication. After publication, individual response records are not shared or sold.

Verification note

This survey is designed to gather registered Wyoming voter input.

Responses may be checked against a Wyoming voter file obtained from the Secretary of State or another lawful source.

Verification may be used to confirm voter status and place verified responses in the correct county, State House district, or State Senate district.

Published results will not include personal identifiers.

What may be published

- Aggregate totals
- County-level totals when enough responses are available
- State House district totals when enough responses are available
- State Senate district totals when enough responses are available
- Exact question wording and response options
- Collection dates and total response count
- Verified and unverified result labels
- Revision notes and limitations

What will not be published

We will not publish:

- Names
- Email addresses
- Physical addresses
- Phone numbers
- Voter-file records
- Individual answers
- Individual open-comment quotes without permission
- Information that could reasonably identify a specific voter

What this survey can and cannot show

This survey can show what participating Wyoming voters believe about data center development.

This survey cannot prove statewide public opinion unless participation is broad enough and the method is clearly reported.

The goal is to create a public record of voter input that can be compared with future policy decisions.

Related support document

A separate Sources and Background document provides optional reference links for voters who want more context. Source material is kept separate from the survey questions so the survey can measure opinion, not shape it.
